

Acoustic Pods

Structure

The structure is built using high strength, low-density metal profiles that are corrosion resistant, heat resistant, and wear resistant, ensuring long term durability and safety. It incorporates sound insulating composite panels with 5+5 mm laminated tempered ultra clear glass, providing excellent transparency, reduced impurities, a lower risk of spontaneous glass breakage, and approximately $R_w = 30$ dB of sound insulation.

The modular system is stable, fire-resistant, environmentally friendly, and low-carbon, with standardized components that are assembled without dust pollution during manufacturing or installation. Built-in anti-corrosion steel connection components improve structural stability while reducing overall weight, making the unit easy to transport and quick to install.

Sound Insulation

The component wall panel is treated with acoustic cavities and soundproofing components, with variable finishes and a prefabricated module sealed mold on the inner layer.

The cabin glass and soundproof door are made of 5mm+5mm damping laminated fireproof, explosion-proof, and soundproof glass, with thin thickness, high sound insulation, long service life, aging resistance, and resistance to water vapor erosion. And combined with sealed adhesive strips, forming insulators and multiple sealing processes to enhance sound insulation, $R_w = 30 \text{ dB}$ (: 5d B)

Ventilation Fan

Low noise exhaust and cabin hidden design, with positive pressure air flow and controlled air humidity to avoid mold. The fan speed is 1800rpm @ 12V, ensuring the comfort and air replacement quality of the cabin interior air.

Lighting

Equipped with a 4000k/1600Lsx lighting system and cabin side light strips; Adapt to 100-240V power supply and 12 V - USB expansion

Acoustic Interior

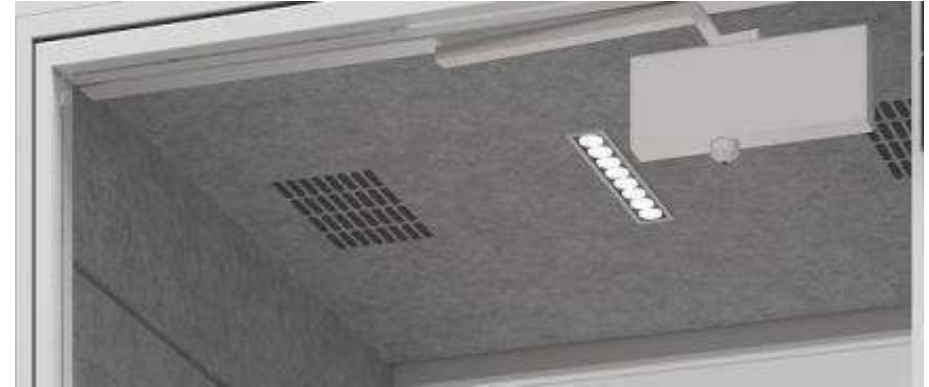

The inner layer is decorated with 9m thick polyester fiber sound-absorbing board. Combining the structure of the cavity layer to form broadband sound absorption, eliminating strong reflected sound inside the cabin, reducing the sense of oppression inside the cabin, and increasing the sense of looseness and comfort of the space

Product Details

Acoustic interior

The inner layer of the non permeable board surface is decorated with 9m thick porous and environmentally friendly plant fiber felt. Combining the structure of the cavity layer to form broadband sound absorption, eliminating strong reflected sound inside the cabin, reducing the sense of oppression inside the cabin, and increasing the sense of looseness and comfort of the space.

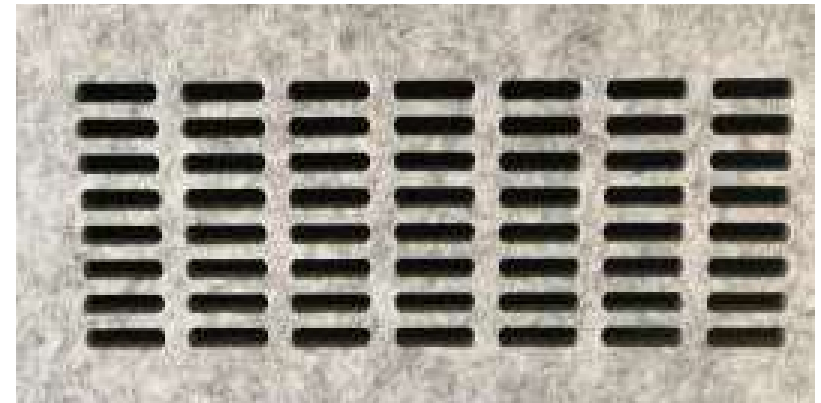

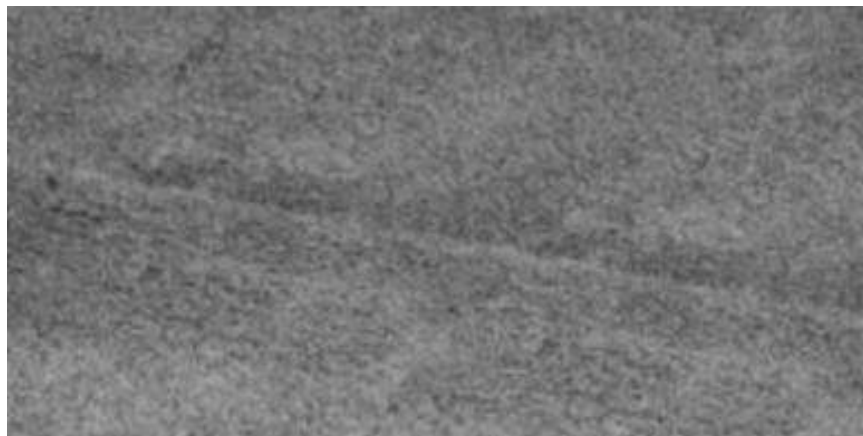

Mobile wheel and Support

The bottom of the silent cabin is equipped with universal rollers and adjustable screw supports , making it fast and convenient to move the cabin to any position after installation .

Acoustic Insulation

Low noise exhaust and cabin hidden design, with positive pressure air flow and controlled air humidity to avoid mold. The fan speed is 1800rpm @ 12V, ensuring the comfort and air replacement quality of the cabin interior air.

Cabin characteristics

The overall design of the cabin is to wrap the outer panel and form a soundproof cavity independently of the inner acoustic panel layer. The interior of the cabin is covered with acoustic finishes, and the structural frame is hidden as a whole, increasing airtightness and color simplicity.

Furniture Matching

The cabin environment is reasonably matched with user-friendly simple furniture according to the customer's actual application scenarios, and flexibly arranged to meet your leisure, office, and learning requirements.

Acoustic Cabins

Ultra-Narrow Collection

Product model S-F1 Phone booth

Booth facilities

- 100-240V/50-60Hz power supply.
- Cabin 4000K natural light central lighting system. Adjustable brightness
- Silent exhaust system. Adjustable air volume
- Handle lock

Dimension

Outside dimensions: W1000*D1000*H2250

Cabin size: W850*D850*H2100

Furniture options

ST-01 Wall mounted table

Product model M-Office Cabin

Booth facilities

- 100-240V/50-60Hz power supply.
- Cabin 4000K natural light central lighting system. Adjustable brightness
- Silent exhaust system.
